DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 and 5-10 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S.

Patent No. 5,442,908 to Briesch et al.

Briesch et al. clearly teaches the construction of a combined combustion and steam turbine power plant comprising at least two mechanically separate but electrically connected and thermodynamically communicated turbines comprising:

at least one industrial gas turbine for producing electric power;

at least one aero-derivative gas turbine for producing electric power; and

including:

a steam turbine unit,

a boiler unit, and

a combustion turbine unit with an exhaust gas duct structure, having at

least one heat recovery steam generator arranged in the exhaust gas flow

downstream of the boiler unit and connected to the steam-turbine unit;

for the purpose of:

supplying steam to the steam turbine unit,

supplying the turbine exhaust gases to the boiler unit,

Art Unit: 2834

supplying any steam generated in the heat recovery steam generator to the steam turbine unit, and

providing improved efficiency at either full-load or part-load operation.

It would have been obvious to one skilled in the art at the time the invention was made to use the use the combined system configuration disclosed by Briesch et al. on the alternating current electric energy system disclosed by Kalitventzeff et al. for the purpose of providing improved efficiency at either full-load or part-load operation of the complete system.

3. With regards to claims 5-7, it should be emphasized that “apparatus claims must be structurally distinguishable from the prior art.” MPEP 2114. In re Danly, 263 F. 2d 844, 847, 120 USPQ 528, 531 (CCPA 1959) it was held that apparatus claims must be distinguished from prior art in terms of structure rather than function. In Hewlett-Packard Co v Bausch & Lomb Inc., 909 F.2d 1464, 1469, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990), the court held that: “Apparatus claims cover what a device is, not what it does.” (emphases in original). To emphasize the point further, the court added: “An invention need not operate differently than the prior art to be patentable, but need only be different” (emphases in original).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
